

WHAT IS CLAIMED IS:

1. A container comprising a container body defining a receptacle portion receiving therein a content and opening at an upper edge thereof, and a lid body engaged with said opening
5 upper edge of said container in a condition closing said opening upper edge of said container,
a toy member attached to at least one of said container body and said lid body.
- 10 2. The container as set forth in claim 1, wherein a hole is formed in said container body, and said toy member is secured on a connecting member extending from said hole.
- 15 3. The container as set forth in claim 2, wherein two holes are formed in said container body, said connecting member extends from one of said two holes to the other of said two holes across said receptacle portion, and two toy members are secured on respective ends of said connecting member extending from
20 respective of two holes.
4. The container as set forth in claim 2 or 3, wherein said hole is provided at a position above said receptacle portion and above said content received in said receptacle portion.
- 25 5. The container as set forth in claim 1, wherein said toy

member is a sliding member slidably provided on an outer surface of at least one of said container body and said lid body.

6. The container as set forth in claim 5, wherein a pair
5 of rail portions are provided on said outer surface in parallel relationship with each other, and said sliding member is located between a pair of said rail portions and slidably mounted along said rail portions.

10 7. The container as set forth in claim 6, wherein said outer surface is drawn pictures, and said sliding member is movable in front of said pictures.

8. The container as set forth in claim 1, wherein said toy
15 member is a handle member mounted on said container body.

9. The container as set forth in claim 8, wherein both ends of said handle member are pivotably connected to said container body.

20

10. The container as set forth in claim 8 or 9, wherein a dispensing opening for taking out said content is formed in an upper surface of said lid body, a small lid flap is provided on the upper surface of said lid body for opening and closing
25 said dispensing opening, and said handle member is positioned

not interfering with said small lid flap in open position, when said handle member is pivoted to a position above said lid body.

11. The container as set forth in any one of claims 1 to 3,
5 5 to 9, wherein said content is a tissue paper.
